Need for documentation

- ► We prefer writing code

- ► **BUT** asynchronous knowledge sharing has VALUE

- ► DRY principle: easier to write once then say it a lot

Use simple files

- ▶ Document THOUGHTS and DECISIONS, not how the code works
- ▶ Developers like to keep documentation close to the code
- ▶ Flat text files are great
- ▶ Most WYSIWYG processors are slow to work with
- ▶ LaTeX syntax is convoluted

DocGen Stack

- Ubuntu Linux
- Pandoc + TexLive
- Some template libraries
- Some MD editor. I use NeoVim

Automate the boring stuff

- Markdown to PDF
- Avoid setting up entire machine
- Can be added to build pipeline

Give it a go!

- **Try it out, and let me know what you think!**
